

Mamata showcases new solutions at Pack Expo 2010!

Changes in global economy particularly over the last 3 years have posed new challenges for Industries worldwide in Plastics and Packaging world. At the same time it has also created new opportunities for companies to grow. At Mamata, our development efforts have always focused on creating products that allow processors to convert these challenges into opportunities and then profit from it.

This year at Pack Expo 2010, one of such creations from Mamata will be on exhibit. We have a 2000 square Ft. booth in Upper Lakeside Centre, Booth E 6658.

On Exhibit will be our Vegaplus 820, A 32" wide Pouch Making System, a versatile machine available in different configurations. Its modular design allows freedom to adapt to differing conversion needs and process laminated and co-extruded films with equal ease. The machine applies servo technology to achieve and enhance processing advantages especially in two areas of tension control and real seal time control.

This is truly a robust, versatile and flexible machine providing an excellent value for money solution for converting needs.

At Pack Expo 2010, we will be demonstrating production

of Side Gusseted Slider Zipper Pouches with quad seals. Side gussets will be printed and registered with Main Web.

The Slider attachment would be SR-202 from PACTIV to run Clip-on Slider Zippers.

This machine can also produce several varieties of three side seal, press to close zipper and stand up pouches from single or multiple webs. With Unwinds to insert separate Bottom or side gusset films, it can do Registered Bottom Gussets or Side Gussets for a stand-up Pouch or a quad seal Pouch. It has registration control for up to 4 separate Webs.

The machine is also capable of producing Side gusseted Quad Seal Pouches with K seals in Gussets from a Single Web, be it a laminate or a Un-supported Co-Ex Film. It

also can produce back seam i.e. fin seal pouches from laminates or Lap seal Pouches from Un-supported Co-Ex films. Ideal for applications of PET Food, Fertilizer bags, Agri produce bags etc where, the input will be a lay-flat sheet, folded and formed to make a side gusseted Bag.

With the adjustable Double cut facility, it would also run notch-less Rounded corner retort Pouches as well as full Bleed Pouches with adjustable size of double cut slit straight

from the Control Panel. **No mechanical hassles involved.**

We also offer fully computerized "Supervisory Control and Production Management System" on it's Pouch Systems. Some of the unique features of this system are:

- ▶ Touch Screen Panel
- ▶ Network Connectivity for direct access from your System
- ▶ Capability to add your equipment to your VPN.
- ▶ Full production Data Logging and Monitoring
- ▶ Full function control from one point.

For more information on the machine at Pack Expo 2010, write to us at info@mamatausa.com / sanjay.amin@mamata.com or call us at 630 801 2320. It will be our pleasure to provide you the desired information.

We look forwarding to welcoming you at our **Booth E 6658** at Pack Expo 2010!
